

Smart as a "Box of Rocks" Water Filtration Unit

Aqua Pure is a water filtration system as simple as "rocks in a box". Aqua Pure offers solutions to safely filter out the dangerous elements to protect our environment and reduce your disposal fees. Save your company money while meeting or exceeding regulatory limits for discharge.

The smart rocks filtering system utilizes proven technology. The rocks are engineered with an EPA formula that attracts the heavy metal impurities found in water jetting applications. The rocks are formulated to meet your needs exactly. These heavy metal contaminants chemically interact with the rocks, converting them to non-hazardous compounds that are removed from the water, greatly reducing the amount of waste generated. This filtering process is affordable and easy to use.
